ITU-T G652(Tables A,B,C,D);

IEC Specifications 60793-2-50 Type B1.3

Type: Low Water Peak, Single Mode

### CONSTRUCTION

<b>Characteristic</b>	Low water peak single mode optical fiber, which enables customers to construct high performance wired networks for voice, video, and/or data transmission. The fiber made of germanium doped silica core and a silica cladding is in compliance with ITU-T G.652A,B,C and D. A dual layer acrylate is coated over the cladding to provide high product reliability and allows easy splicing throughout the cable life. Its low water peak characteristics and excellent stability performance against hydrogen provide broad-range operational bandwidth while maintaining fully compatibility with conventional SMF with higher proof testing, the fiber gives much tolerance in cabling and installation.
<b>Type of primary coating</b>	dual layer UV cured acrylate
<b>Core material composition</b>	germanium doped silica, no boron, no phosphorous
The optical fibres inside the cable do not contain splices.
